Forecast for Friday 28 Jan 2022

Weather: Dry through the early hours with thickening cloud lowering onto the munros. From dawn it will be a cloudy start with wet weather soon arriving, this falling as sleet initially above munro level. Rain and drizzle will become persistent across all areas, occasionally heavy on west facing slopes.

Chance of cloud-free hill tops above 800m: Virtually no chance.

Low Cloud and visibility: Low cloud, initially patchy above 800m will soon become extensive across all areas and lower towards 300-400m. Any breaks will be fleeting and unreliable. This cloud along with persistent rain and drizzle will lead to fog conditions for all but lowest slopes and even glens are likely to turn rather hazy.

Met Office Aberdeen Meteorologist's View

A day of multiple hazards. Strong winds and persistent rain combining to bring a very real risk of cold weather exposure. Wind strengths will make progress slow, arduous and perhaps dangerous.

Forecast for Saturday 29 Jan 2022

Weather: Heavy rain and storm force winds continuing into the small hours of Saturday as a cold front sinks southeast. This then gives way to colder conditions and scattered snow and hail showers by mid morning. Bitterly cold. Largely dry with clear spells to end the day.

Maximum wind: West 50-60mph gusting 75mph, veering Northwest 30-40mph gusting 55mph through morning, easing through evening.

Chance of cloud-free hill tops above 800m: 10% improving 70% by afternoon.

Low Cloud and visibility: Extensive cloud above 500-600m will clear from the northwest through morning. Passing snow showers, mainly affecting northern Lochaber, will bring areas of cloud down to 500m or so along with near whiteout conditions. Few if any showers reaching Loch Lomond area with plenty of sunshine here.

Temperature: **Glens:** Mild initially, around plus 10 Celsius, falling to 5 or 6 Celsius through the day.
At 800m: Plus 4 Celsius quickly falling to minus 2 Celsius.
Freezing level: Well above summits, falling to 600m by midday.
